Guests order for themselves. The kitchen sees it right away.

An ordering system for eateries. Guests scan the QR at the table, pick their food, and the order reaches the kitchen.

Ask on WhatsApp

See pricing

Heard any of these before?

Is my order ready yet?

I didn't ask for extra sambal!

How much is the total?

With Warung, guests see the status and the total themselves. You keep cooking.

From the table to the kitchen

Scan

Guests scan the QR at the table. The table number is already filled in.

Order

Pick food and extras, send it. Pay at the counter or by QR transfer.

Cook

The order arrives on your screen with a chime. One button for each stage.

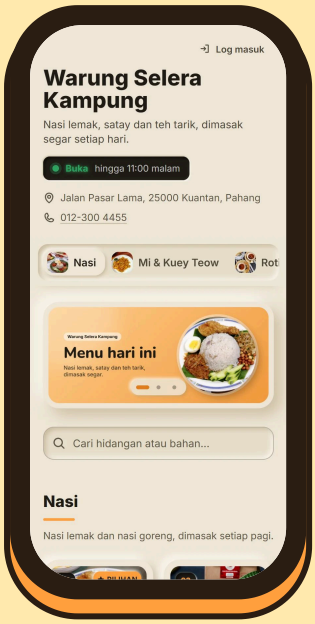

Serve

Guests watch the status until the food is ready.

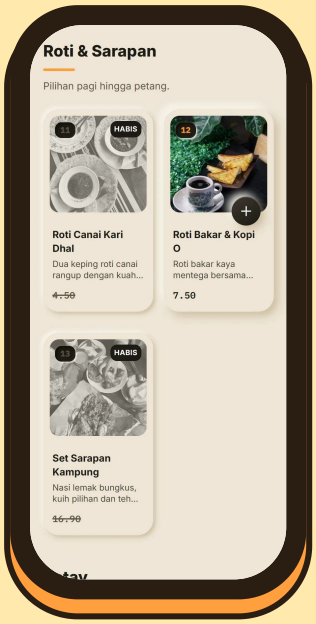

What your guests see

All on their phone, with no app to install.

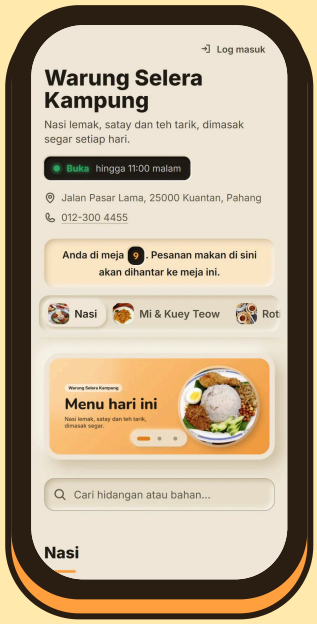

A menu with pictures

Categories, search and a photo for every dish. Sold-out dishes are marked.

Sold out, marked by itself

When the count hits zero, the dish marks itself sold out without you touching a thing. When only a few are left, guests see "Only 6 left".

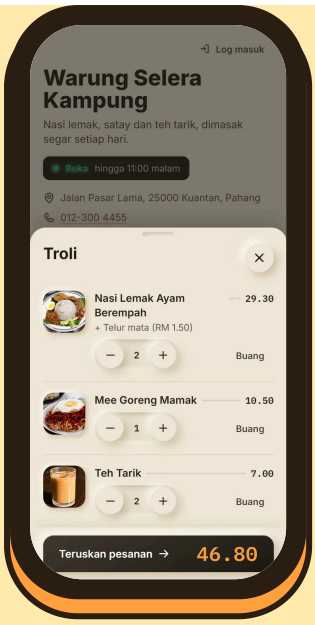

A QR code for every table

The link carries the table number, so nobody has to type it.

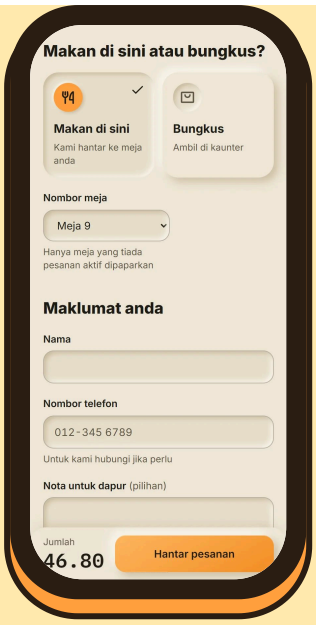

Pick the extras

Fried egg, extra sambal, more chicken. You set the price of each.

A clear cart

The total updates as you go. Add, reduce or remove before sending.

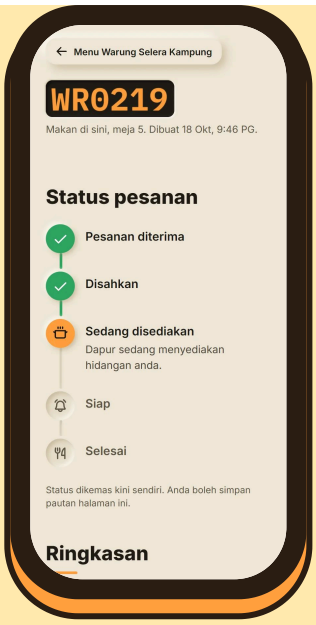

Dine in or takeaway

Only free tables are offered. There is a note for the kitchen too.

Pay at the counter or by QR

Transfer to your shop's QR, upload the proof, and your staff confirm it.

A status that updates itself

Received, confirmed, preparing, ready. The page refreshes on its own.

Order history

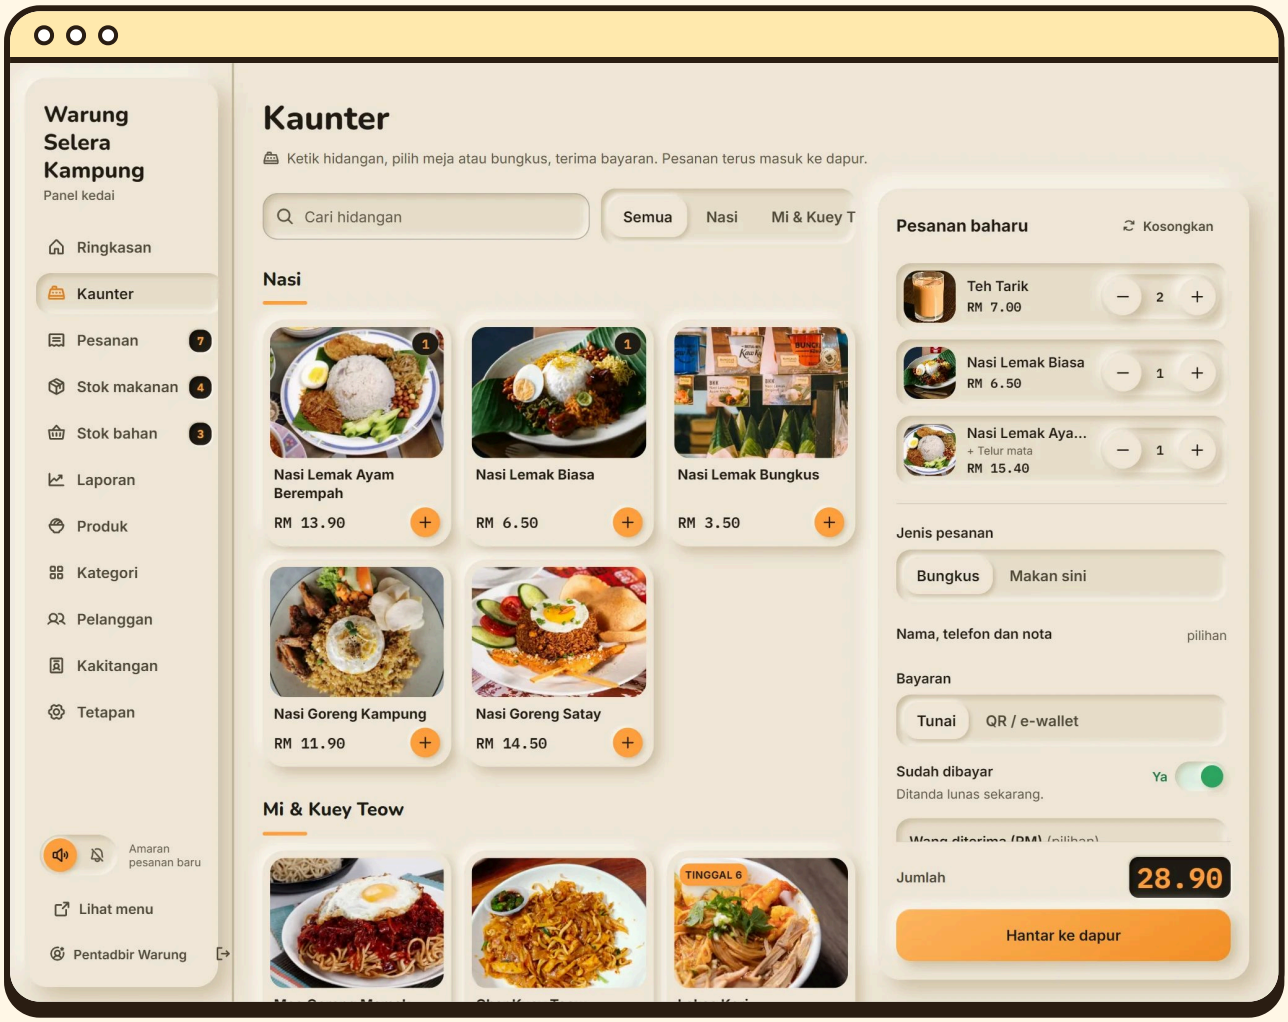

Register once. Past orders and receipts live in the guest's account.

What you and your staff run

Tap any picture to enlarge it.

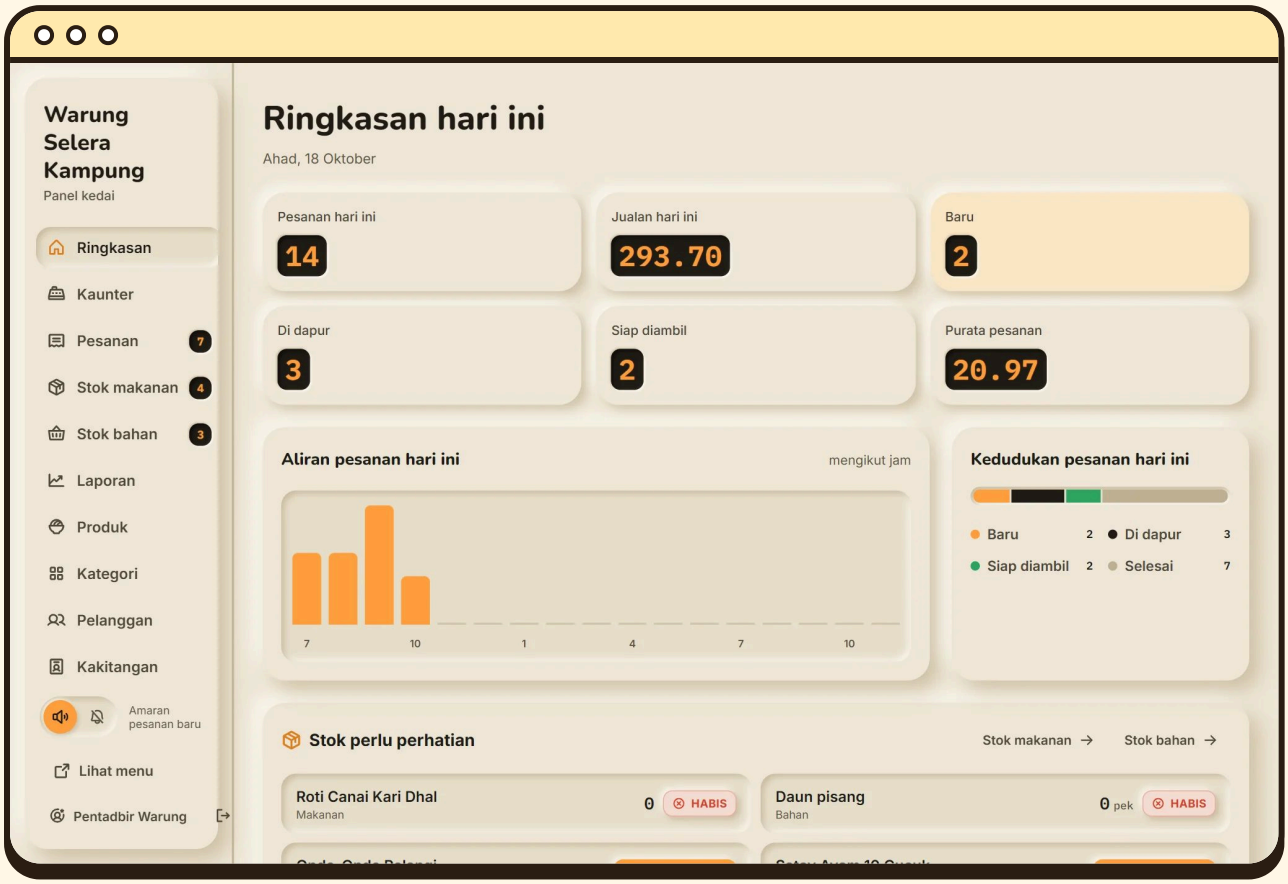

A counter for people who walk in

The customer is at the counter with no phone out. Staff tap a dish photo, choose takeaway or a free table, take cash or QR and see the change to give back. The order goes straight to the kitchen, stock and ingredients drop as usual, and the receipt can be printed. Name and phone number are optional. Works on a tablet, a phone and a computer.

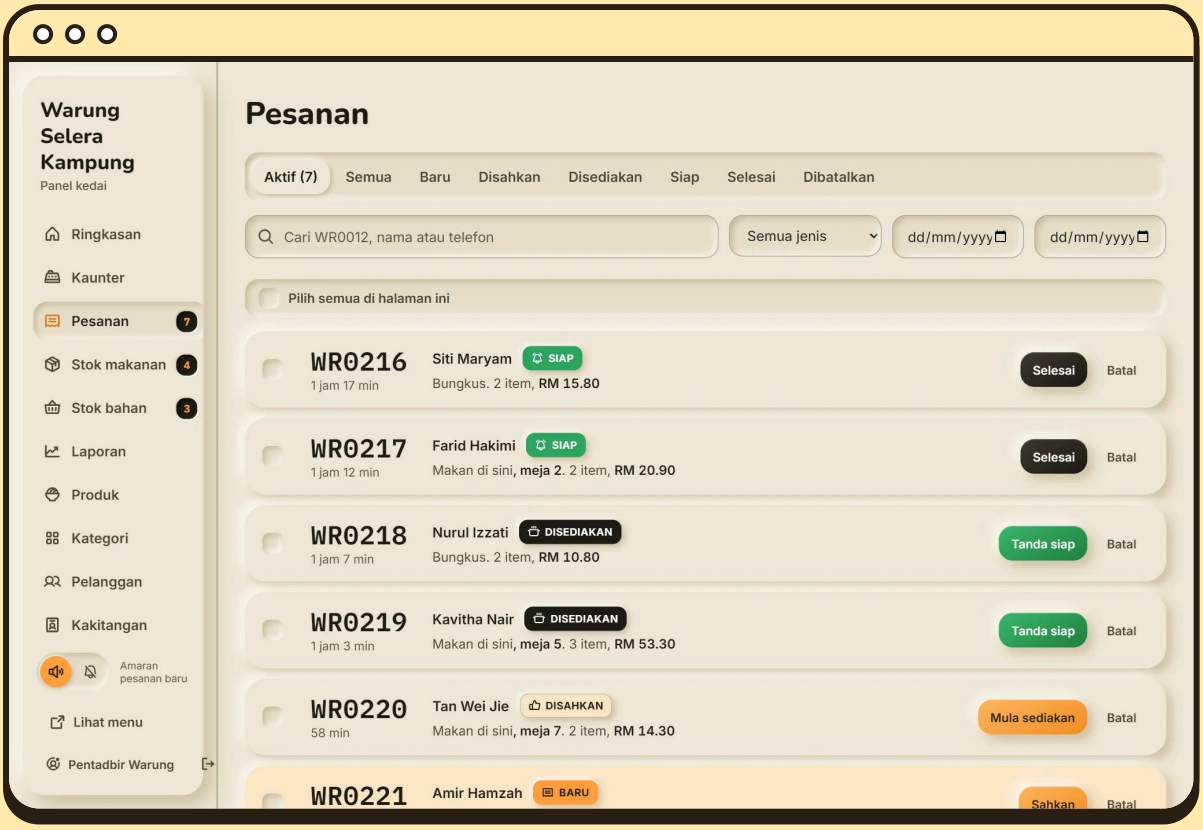

Today at a glance

Orders, sales, the average order and your busiest hours. Dishes and ingredients running low are listed too. Refreshes every 15 seconds.

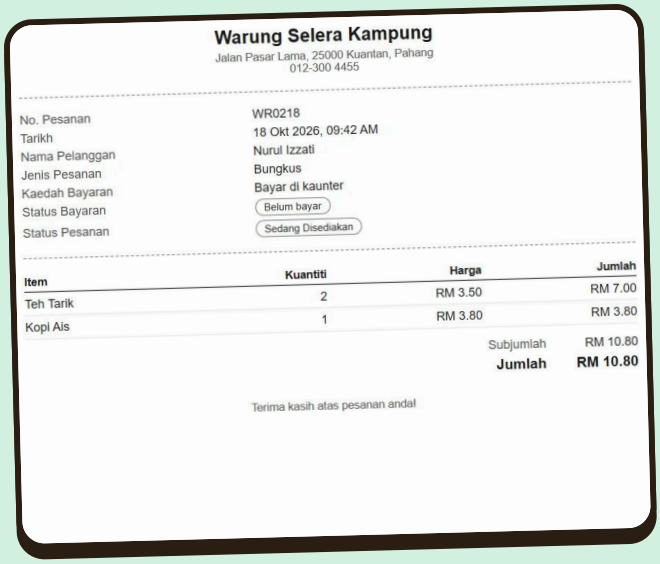

Orders arrive with a chime

New orders sound an alert and can pop up as a browser notification. One button each to confirm, prepare and mark ready.

Print receipts

An A5 receipt for one order, or many at once from the reports.

Warung Selera Kampung
Jalan Pasar Lama, 25000 Kuantan, Pahang

Kopi Ais	1	RM 3.80	RM 3.80

Subjumlah RM 10.80
Jumlah RM 10.80

Terima kasih atas pesanan anda!

Check payment, fix an order

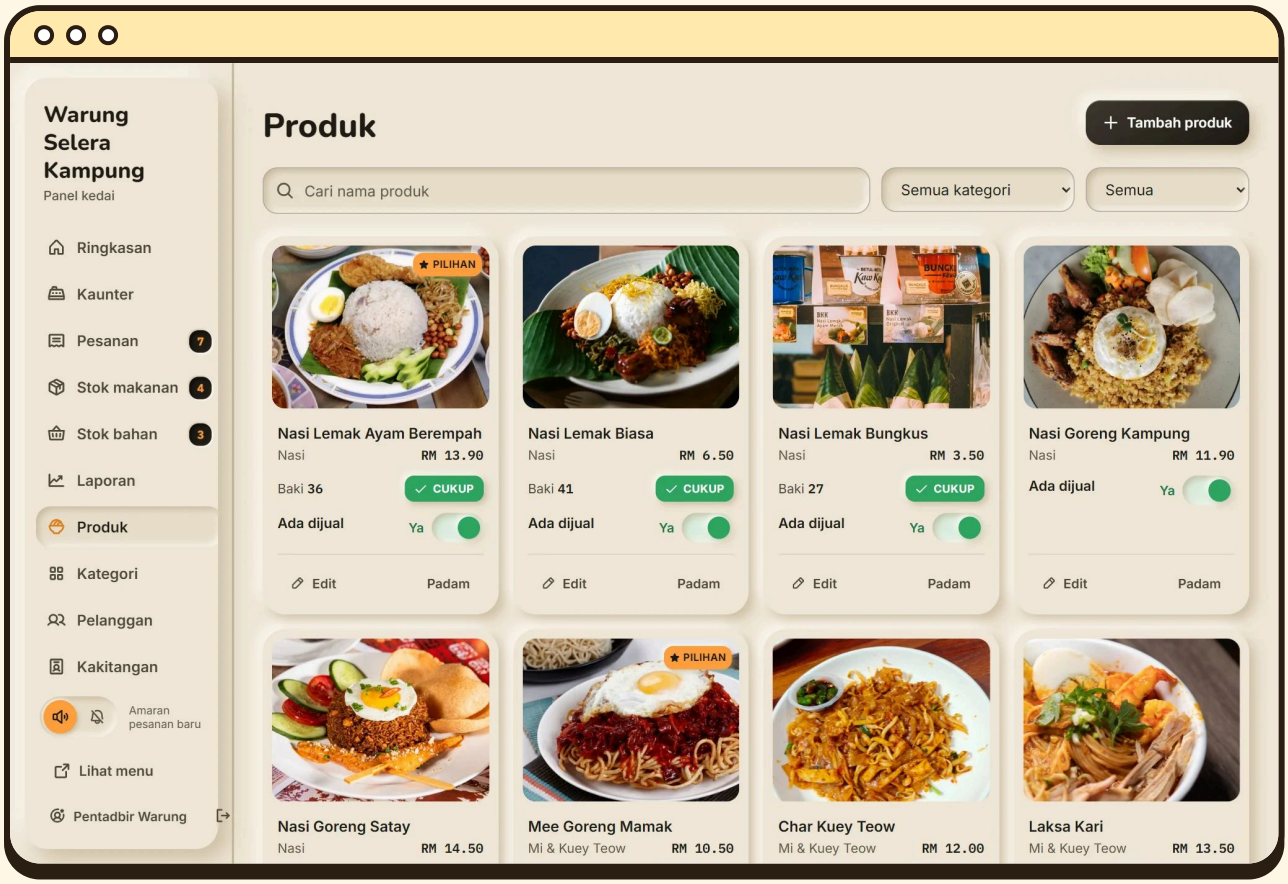

See the proof of payment, confirm it, change quantities or names. Every stage is logged.

Run the menu

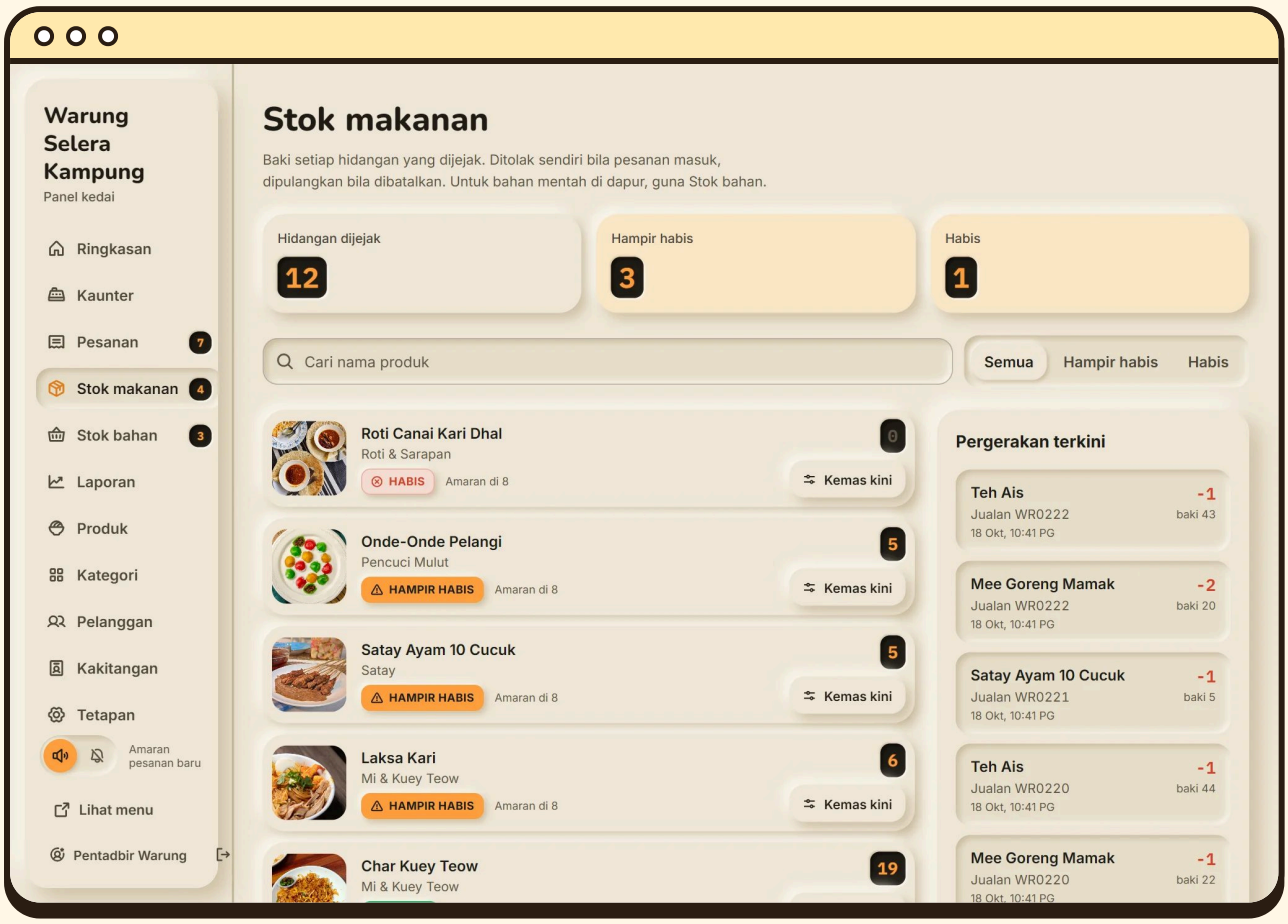

Products

A switch for in stock and sold out. Search by name, category or availability.

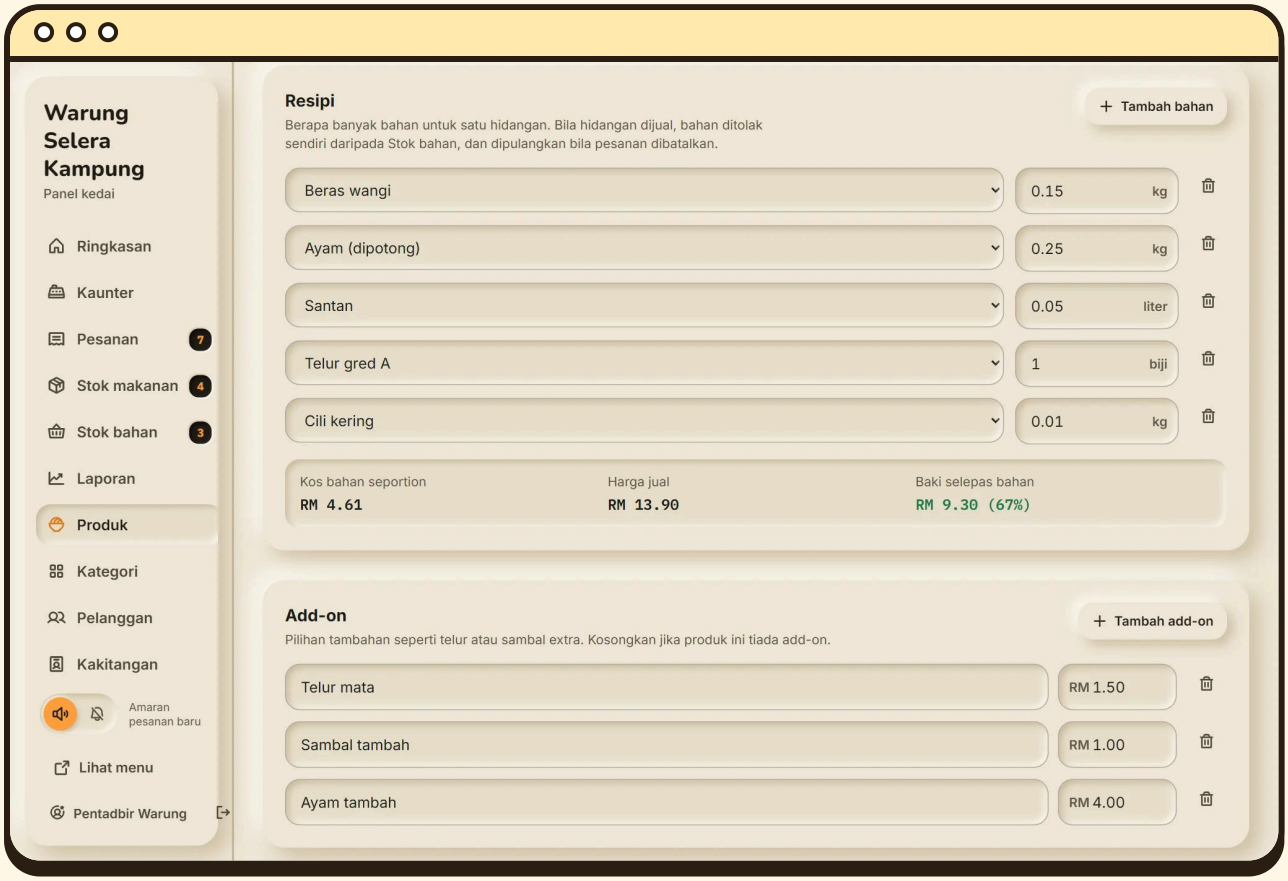

Dish stock

The count drops by itself when an order comes in and returns when it's cancelled. Add stock, log waste or correct the count after checking the shelf, all recorded with who and when. Dishes running low show up on the summary. Guests see at once when something is gone. When something runs out or runs low, the panel chimes and pops up, even if you are on another page.

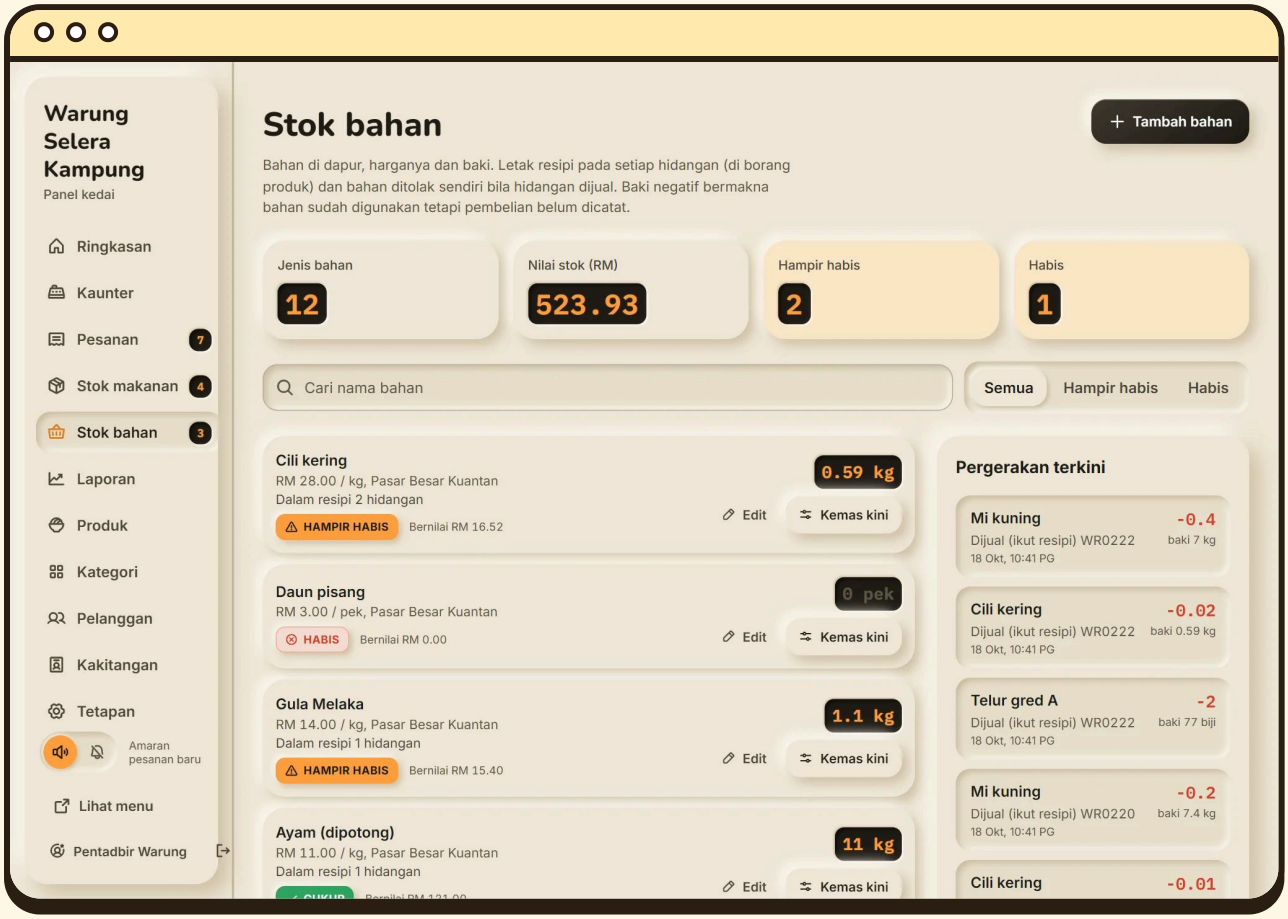

Recipes and cost

For each dish, write how much rice, chicken or coconut milk goes into one portion. When the dish sells, the ingredients come off the stock by themselves. If the order is cancelled, they go back. You also see what each dish costs in ingredients and what is left after them, so prices stop being guesswork.

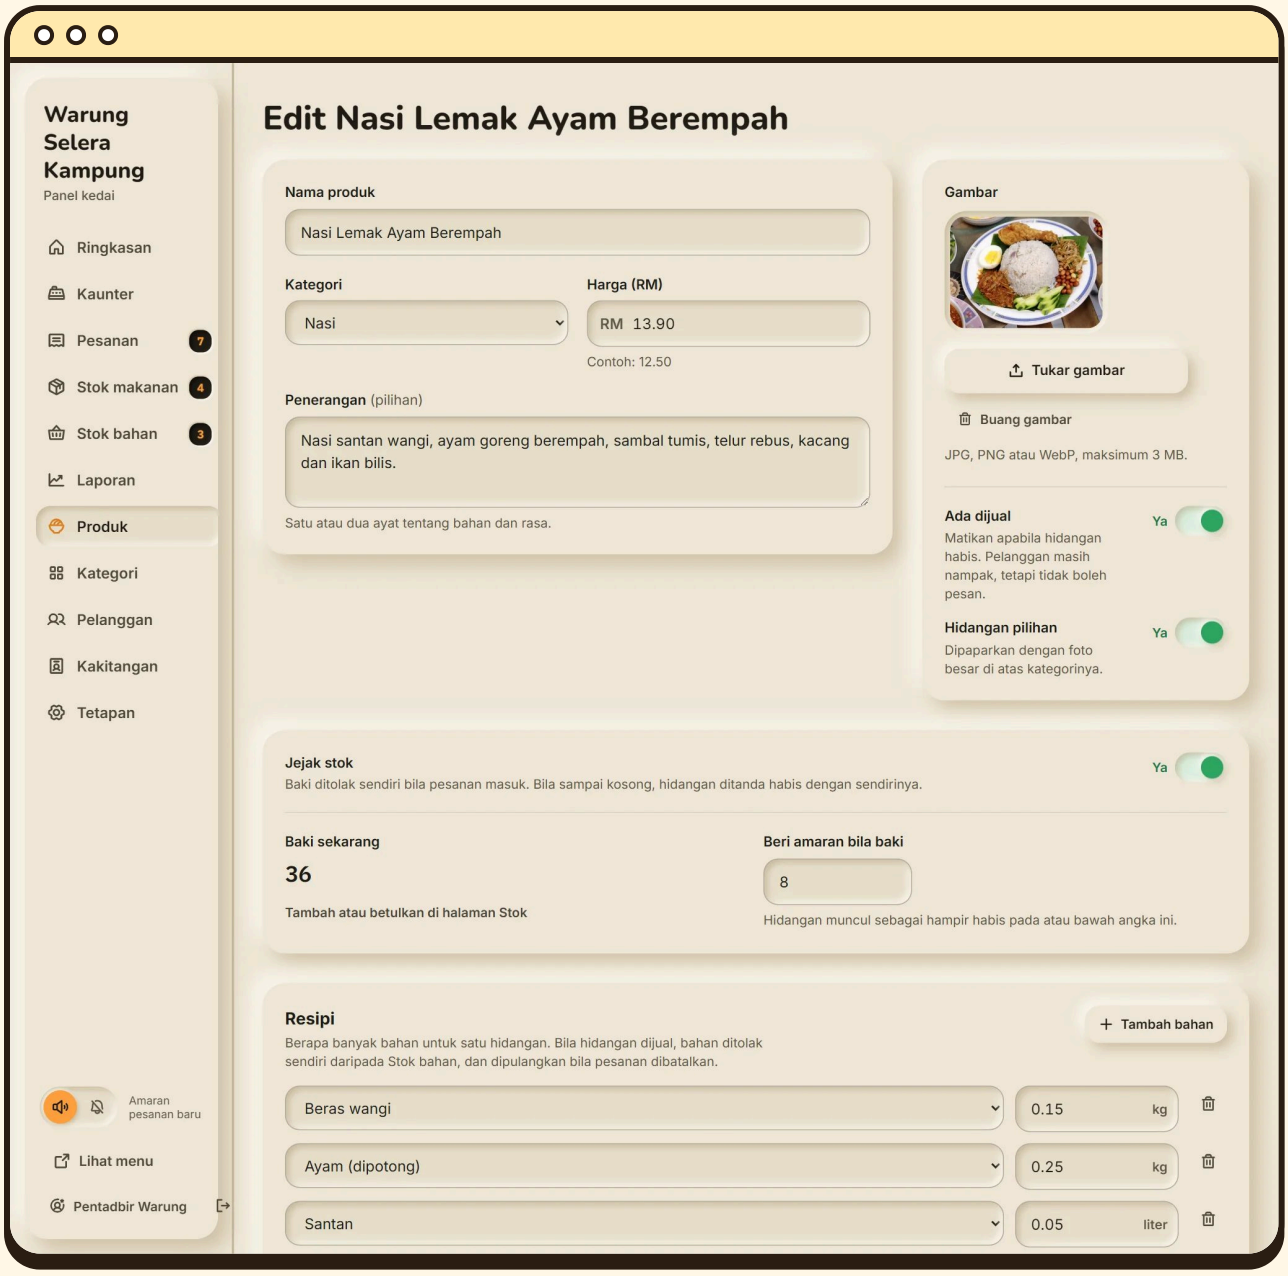

Ingredient stock

The kitchen's shelf list with a price per unit, the count and the stock value. Staff log what was bought, used or thrown out. Ingredients in a recipe drop by themselves when a dish sells, and every movement shows its order number. A negative count means the ingredient was used but the purchase was never logged.

Add or edit

Photo, price, description and extras for each dish. Switch on "Track stock" for dishes you count.

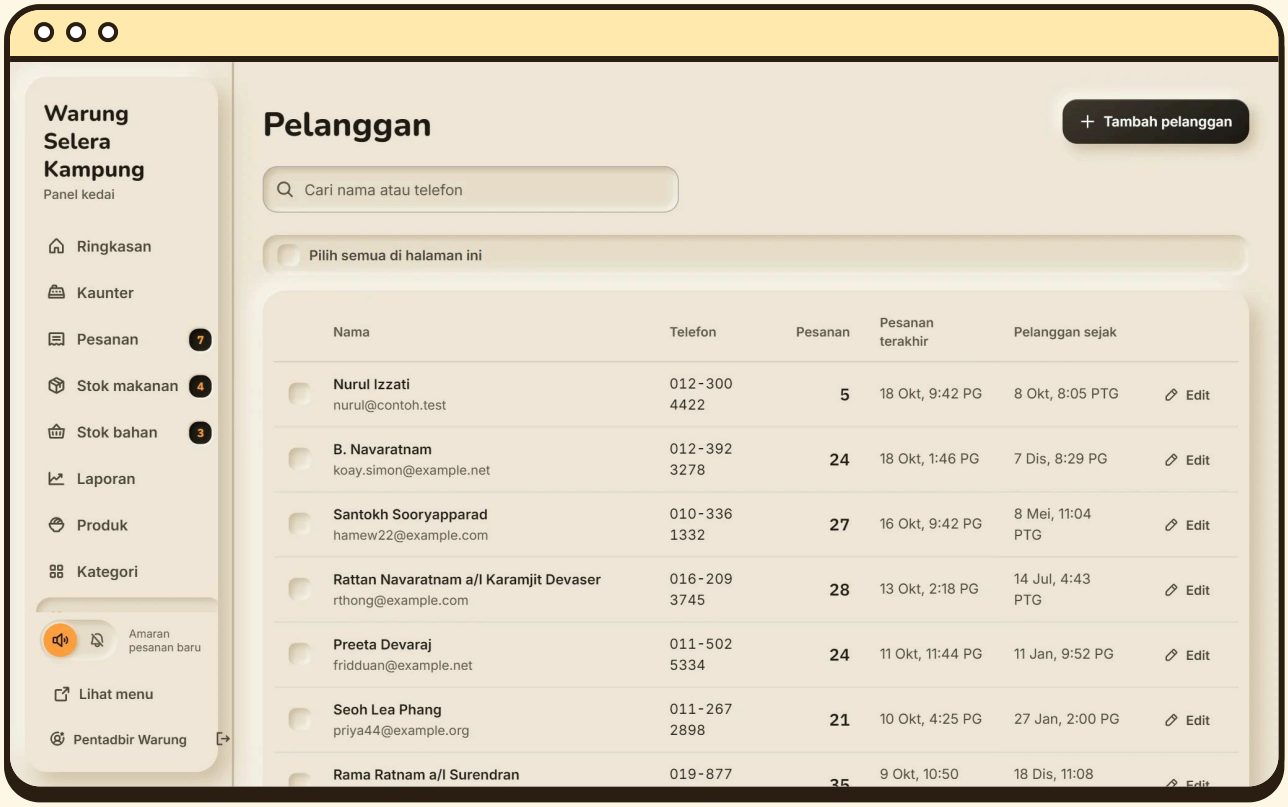

Categories

Arrange them as you like. Dish numbers (01, 02…) follow the order.

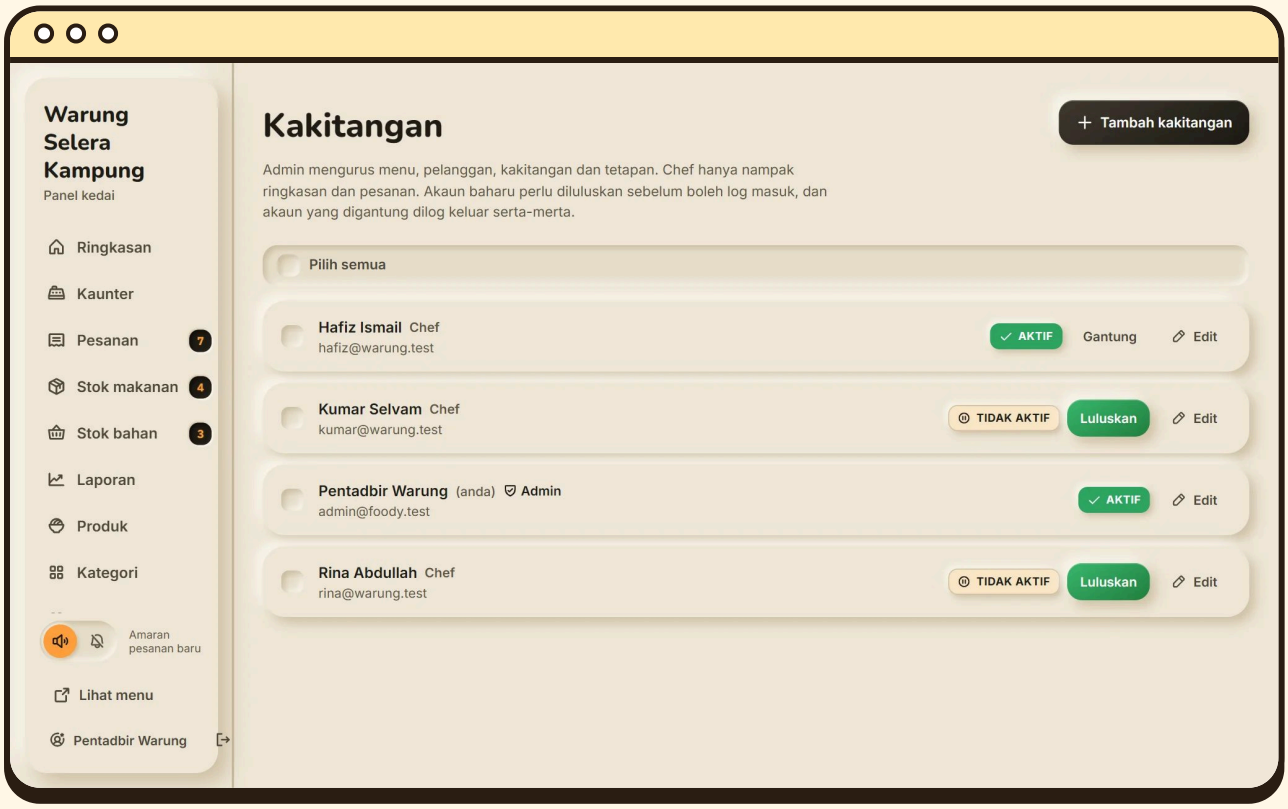

Customers

Who orders, how often, and when they last did.

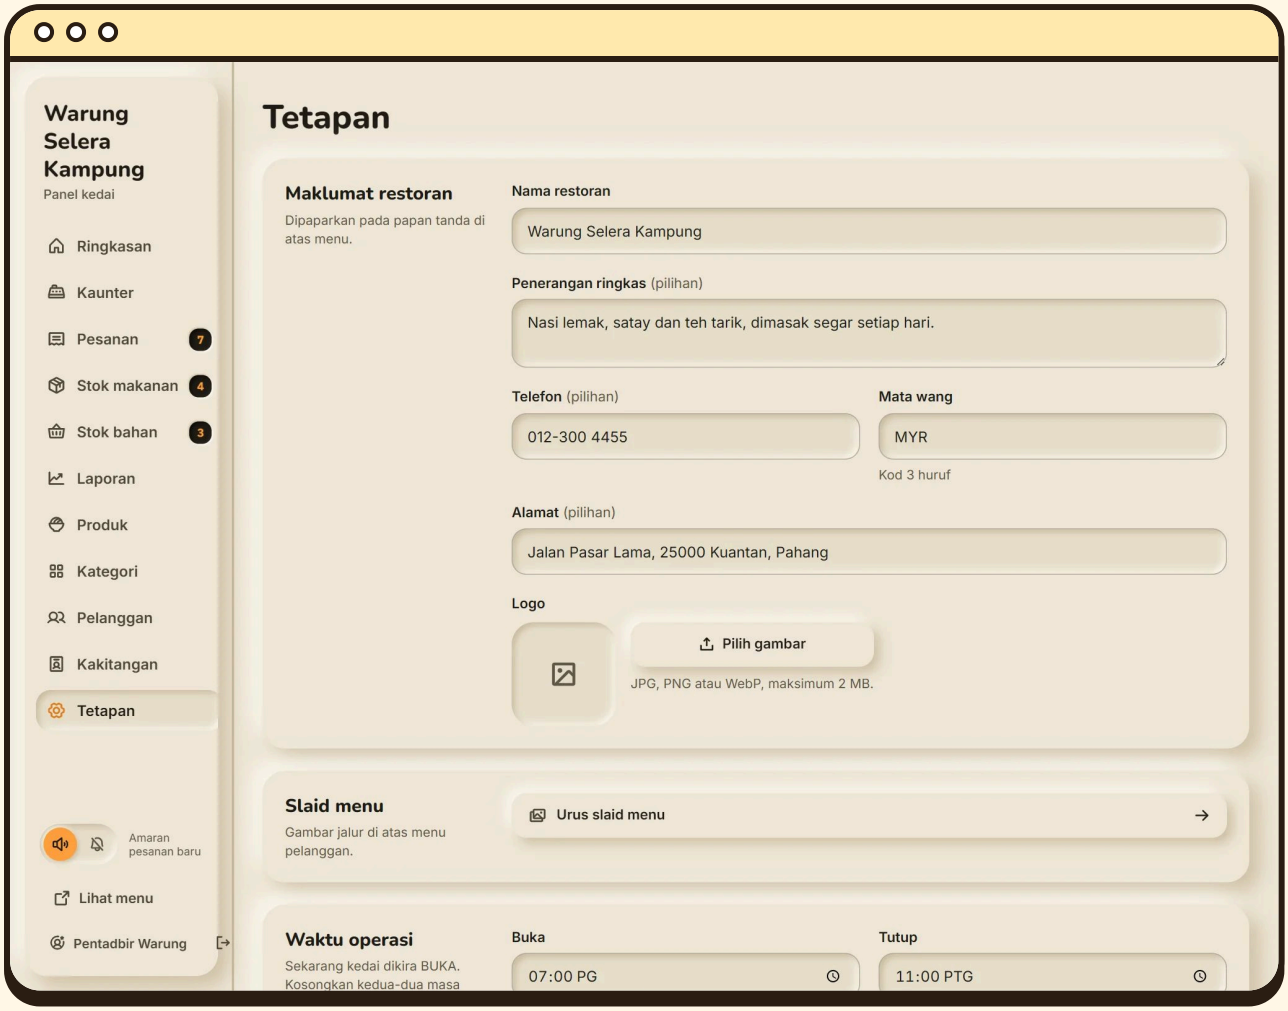

Staff

Admins and staff. New accounts need approval, and can be suspended instantly.

Shop settings

Opening hours, number of tables, dine-in or takeaway, payment QR.

What Warung doesn't do yet

- Automatic card or FPX payments. QR payments are confirmed by your staff.
- One eatery per account. A second branch needs its own account.
- Ordering needs an internet connection. Guest and staff screens are in Bahasa Melayu.

Pricing

Billed monthly. I take care of hosting and upkeep.

System only

RM199 a month

- ✓ Every Warung feature above.
- ✓ No sales page.

System + sales page

First month **RM380**

Month two onwards **RM280**

The first month includes a one-time RM100 to set up the sales page.

- ✓ Everything in the System plan.
- ✓ A web page for your eatery with the menu, location, opening hours and an order button.

Want to see Warung running?

Message me on WhatsApp. Tell me a little about your eatery and I'll show you the parts that matter most.
